

PREMIER RETICLES

Why settle when you can have a V8!

There's a revolution coming in the world of CQB!

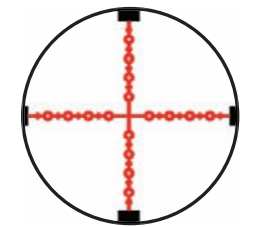

No longer will you have to settle for mounting two separate sighting devices on your weapon to engage targets from 5ft to 500 yards. Our **NEW** 1.1-8x24 V8 series CQB riflescope delivers superior optical quality, precise and reliable adjustments, along with a two focal plane (reticle/red dot) sighting system that makes switching from 500 yards to 5ft as simple as a turn of the power selector and all without leaving your shooting position. Our unique switching system automatically changes from an illuminated Gen 2 CQB reticle in the 1st focal plane to a projected red dot in the 2nd focal plane, once the magnification selector is adjusted down below 3x. This functionality allows the shooter to engage targets with both eyes open from 5ft to 50 yards on settings 1.1 to 3x or in traditional longer range shooting style from 50 to 500 yards when set from 3 to 8x.

Key Features:

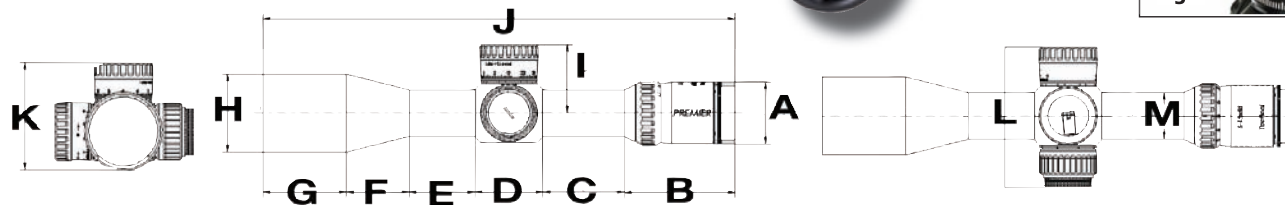

- Illumination; 11 intensity settings with an "off" position between each setting. (1st three settings for use with nightvision) (Fig. 1)
- Unique 1st & 2nd focal plane sighting system with auto switching at 3x
- 8x ratio magnification and field-of-view
- Leverlock™ dial retention for tool-less re-zero (Fig.2)
- Locking turrets, 0.1mrad per click, 17mrad Single Turn revolution

Gen 2 CQB
